

作用：包含IP和端口信息，常用于Socket通信。此类实现 IP 套接字地址(IP 地址 + 端口号)，不依赖任何协议。

InetSocketAddress的使用

```
1  import java.net.InetSocketAddress;
2  public class Test4 {
3      public static void main(String[] args) {
4          InetSocketAddress socketAddress = new InetSocketAddress("127.0.0.1", 8080);
5          InetSocketAddress socketAddress2 = new InetSocketAddress("localhost", 8080);
6          System.out.println(socketAddress.getHostName());
7          System.out.println(socketAddress2.getAddress());
8      }
9  }
```
